Hi guys-

I installed your new stable build (May 03) from sourceforge and fixed the first
problem of U++ IDE not launching with gnome - 18.04 - Ubuntu. Now, when I
click to run the app after building and linking, the app doesn't start.
It just sits on the dash but won't let me see anything except in a thumbnail preview.

Any ideas why gnome hates me launching applications?

thanks,
roboloki
