Hello Pradip,

Well this is strange, under linux all compiles fine with lattest svn version
The missing functions can be found in uppsrc/CtrlLib/Ch.h so it shoudn't be a problem

Which Upp version are you using ?

I am having difficulties with the lattest Upp svn versions on Win : my MCS V15 compiler crashes
8o ( and CLANG doesn't work du to path problems and I can't change them: I don't have admin
rights to change paths)
The current version I work with on Win is svn 14390
So I am stuck to 14390 for the moment on Win

Didier
