Hi,

My CPU here is Intel(R) Core(TM) i7-4790K:

<https://ark.intel.com/content/www/us/en/ark/products/80807/intel-core-i7-4790k-processor-8m-cache-up-to-4-40-ghz.html>

Not surprisingly, they say it has an 8M 'smart cache'.

Please find attached two CSV files portraying execution time in ns for each call in average. The length is in dwords. Fill3a is there for reference and Fill3T is using 64 dword threshold for streaming in one and 2M dword (8MB) threshold in the other file. While not portrayed here, increasing the threshold above 32MB decreases the performance from 1.5 ms to 3.6 ms for a 32 MB buffer.

Best regards,

Tom
