I am getting quite different picture:

```
int bsize=8*1024*1024;
Buffer<dword> b(bsize, 0);
dword cw = 123;

String result = "\N\","memsetd()\","Fill3T3()\r\n";
for(int len=1;len<=bsize;){
    int maximum=100000000/len;
    int64 t0=usecs();
    for(int i = 0; i < maximum; i++)
        memsetd(~b, cw, len);
    int64 t1=usecs();
    for(int i = 0; i < maximum; i++)
        Fill3T3(~b, cw, len);
    int64 t2=usecs();
    String r = Format("%d,%f,%f",len,1000.0*(t1-t0)/maximum,1000.0*(t2-t1)/maximum);
    RLOG(r);
    result.Cat(r + "\r\n");
    if(len<64) len++;
    else len*=2;
}

SaveFile(GetHomeDirFile("memset.csv"),result);
```

I am starting to wonder if there is difference between our MSC 32bit compilers...
