Hello Pradip,

Two points:

- * FitToData() isn't implemented yet for CustomData :blush:
- * RefreshBars() is useless, all the refresh is already managed

What you need to do is:

- 1 - Set graph limits

```
graph.GetX1CoordConverter().SetGraphMin(...)  
graph.GetX1CoordConverter().SetGraphMax(...)  
graph.GetX1CoordConverter().setGraphMinRangeLimit(...);  
graph.GetX1CoordConverter().setGraphMaxRangeLimit(...);
```

- 2 - Set data as modified (so it will be refreshed automatically)

This is important because the resulting image is cached to speed-up display when moving a cursor, changing tabs or whatever

```
graph.SetModifyCustomSeries(); // this will force full repaint on next refresh  
graph.Refresh();
```
