Hello Pradip,

Two points:
 * FitToData() isn't implemented yet for CustomData :blush:
 * RefreshBars() is useless, all the refresh is already managed

What you need to do is:
 1 - Set graph limits

    graph.GetX1CoordConverter().SetGraphMin(...)
    graph.GetX1CoordConverter().SetGraphMax(...)
    graph.GetX1CoordConverter().setGraphMinRangeLimit(...);
    graph.GetX1CoordConverter().setGraphMaxRangeLimit(...);

 2 - Set data as modified (so it will be refreshed automatically)
    This is important because the resulting image is cached to speed-up display when moving a
cursor, changing tabs or whatever

    graph.SetModifyCustomSeries(); // this will force full repaint on next refresh
    graph.Refresh();
