mirek wrote on Mon, 01 June 2020 17:32 Maybe you can try cross-compilation.

<https://github.com/mstorsjo/llvm-mingw/releases>

If you do not have ubuntu 18.04, building llvm-mingw for you linux distro should be relatively simple....

It could be interesting experiment. Actually, we can even add a simple support in ide / umake to prepend binary with "wine" for execution...

Mirek

First attempt is unsuccessful.

umk completely ignores all my attempts to set path to a different clang version.

I changed PATH and even put absolute path to clang into COMPILER.

Everything was ignored.

BTW, you put in PATH folders with dll-s ... What is that for?
