Novo wrote on Tue, 16 June 2020 21:22: Another implementation using `initializer_list`:

```
template <typename T>
constexpr T get_i(int i, std::initializer_list<T> list)
{
    return list[clamp(i, 0, list.size())];
}
```

This one is strictly-typed, although I couldn't check assembly with godbolt because it complains about something ...

Nah, we do not want strict typing here.
