Hi kuldo,

still not clear.

I get the following error :

cannot call member function 'virtual bool Upp::TopWindow::Key(Upp::dword, int)' without object

```
bool Tab5_Dynamic::Key(dword key, int val)
```

```
{  
    LOG("key");  
    DUMP("KeyAction");  
  
    if(key == K_CTRL_S) {  
        bStart.Action();  
        return true;  
    } else  
        return TopWindow::Key(key, val);  
}
```
