Novo wrote on Fri, 03 July 2020 18:53I guess that the problem is that in case of MSVC common type of `const char*` and `String` is `const char*`, and in case of Clang it is `String`.

Yes, however that does not break C++ specification... BTW, I had to do another fix today... Converting `decode` to `vararg` templates is really pandora's box...
