Hello Pradip,

I just uploaded the latest version of the code.
The feature you requested is now the default behaviour :) (although original behaviour can stil be set by using SetZoomOnCursor(false))

It took me some time because I had to finish plugging back in Properties Editors and be compatible with Chameleon) and I did some more cleaning up.

Noticable changes:
  * Properties dialog accessible in plot area now displays one Properties dialog containing all the dialogs in tabs (it can be fully customized)
  * Properties values can now be changed and are comptible with Chameleon :)
  * some renaming has been done
  * some cleaning has been done
    GraphDraw_CRTP has been deleted and an uneeded inheritance level has been removed
    Take a look at GD_XYLTMM_GraphCtrl : it now contains a good example to build a fully custom GraphCtrl

You should get 2 small compilation issues:
  * all GraphElements StyleXxxx renamed to StyleGEXxxx example: StyleXAxisDefault() ==> StyleGEXAxisDefault()
  * all X_ or Y_ in Types renamed to X1_ and Y1_ example X_TypeCoordConverter ==> X1_TypeCoordConverter
Look at the GanttCtrl package : I made the corrections needed

These renamings aim to suppress ambiguities to make code more readable.

I think most of the renaming/cleaning should be finished now, all this started when I pushed Chameleon in and I wanted to have a better code base

Note: Properties dialogs are quite ugly and not finished : next step is to try to do better ;)

BTW : you're GridAxis works fine, looks great and it will be a great addition. If you enhance it please post it back so we can all benefit
