
Subject: [Proposal] The maintainer and the future of TURTLE package

Hi,

I was wondering if TURTLE is actively maintained. I value this package, and I find it useful for my purposes.

Does it have a maintainer? IF not, I'd be happy to step up to be its maintainer.

My initial plan is to move it to VirtualGui.

I already have an experimental version of it based it on VirtualGui.

However, VirtualGui seems to define DoPaint and SyncCaret methods, And they are not overrideable. Is there any other way, in which I can get text cursor (caret) and mouse cursor information to send over the wire protocol?

Best regards,
Oblivion
