RichEdit edt;

// then i pasted a image to the edt from cliboard

```
const RichText& rt = edt.Get();
```

```
// how can i get the image from RichText?
```

tk!

Well, there can be more than one...

However, if you want to get all of them, then the easy way is to use RichText::Iterator to iterate through all paragraphs, then RichPara::GetCount, RichPara::operator[] to iterate through all paragraph parts, check if that is object, convert the object to its natural size and paint it...
