But what can explain some framework like Qt or WxWidgets is well more known, is QT team or
else has made advertisement ?

Both Qt and WxWidgets have their own license, do it make them (from an enterprise point of view)
more serious way of working than a BSD framework ?
(if yes then, what about Linux ? Apache ? etc ?)

from my knowledge, beginner developer don't do C++, but everytime I introduce some of them to
U++ they get convinced by the power of the tool. the only problem is their lack of skills about C++
and all the complexicity of "pointers" "mutex" "stack/heap memory" . Damn you modern
alternatives to C++ !
