Xemuth wrote on Thu, 06 August 2020 13:25But what can explain some framework like Qt or WxWidgets is well more known, is QT team or else has made advertisement ?

Qt is developed by big commercial team. Frankly, that creates an image of stability and future.

WxWidgets are somewhat older than U++ and were used for some pretty important apps. Also wxWidgets archicture, if I remember well, is unique in a sense that it is not emulated toolkit (means wxWidgets is using widgets from host platform, unlike U++ or Qt, which has own implementation) - this probably has some appeal for developers too.
