When I compile and I prove anything app in Windows passes a couple of rare things.

1) the corresponding icon is not seen in the bar of tasks, thing can bother much when it works with many windows. And is it a problem with the minimized windows.

2) If beginning the program with the Explorer of Windows and I minimize the Explorer, the launched program also disappears, as if outside a "son" pop his.

3) If change the way of visualization of XP to clasic or any other style new style of winXP takes place a series of rare errors, that they do not take place if I assign to the chameleon style CH_STYLE_STD.

This does not bother much mainly to me because work in linux, and in addition surely that has easy solution.
Nico
