Quote: It looks like most toolkits simply use HarfBuzz anyway...

Well, this seems to be the best option but I was even afraid of suggesting it, as it means another dependency (and possibly a lot of work):)

By the way, If you think it's ok, In the meantime we can have better precomposition support. I've attached Charset.cpp with the patched UnicodeCombine for full precompositions support (for 16-bit UCS canonicals only).

(I can also send the extractor code for uppbox if needed)

Best regards, Oblivion
