Oblivion wrote on Sun, 23 August 2020 10:52Quote:

for phase 3, we can either decide to use platform specific library (Uniscribe/pango), which would mean encapsulating it to something platform independent, or just use Harfbuzz

To my knowledge, the latest version of pango can be compiled on Windows too (but satisfying its dependencies might not worth the effort). Also, the latest version of it seems to support harfbuzz as a backend.

Well, pango is definitely using harfbuzz, it is AFAIK even developed by the same person...
