Subject: Custom build configuration per package
Posted by Xemuth on Sun, 23 Aug 2020 21:30:34 GMT

I'm using bazaar/Assimp. When I launch my program in debug mode, my application became incredible slowly to debug because of assimp (it run fast when compiled in release) That's why I'm wondering if there is any way to compile the assimp package in release mode (even when I'm in debug) ?
