Subject: Issue with compilation

Hi,
I am developping an application using MySql library. Everything is going well. Except that the produced exe file in the out directory displays an error when compiling with Clangx64 not with Clang. My system is family windows 10 (64 bits).

The displayed error is 0xc000007b preventing the application from starting. :(

I would expect that the Clangx64 would produce a workable exe on a win64 system. Do you think the problem is linked to MySQl server installation (version 5.7)

Thank you in advance for any reply

Good day
