Additional info: My original app has a customerstable.cs definition file (converted to c):

```
struct customersTable
{
    int id;
    String name;
    String email;
    String contact;
    String address;
    String city;
    String state;
    String zip;
    int taxable;
};
```

Do I need something like this here?
Thanks.
