Hi Oblivion,

The taps now go through as clicks, which is nice. :)

The DroidFonts is too much for MSBT19 and MSBT19x64. Linking fails due to already defined font functions. (The same as were missing before...) In my case the plain FT_fontsys is enough.

I also noted that now the window size automatically matches that of the browser window client area even when the phone is rotated between landscape/portrait modes. This is very nice indeed!

Thanks and best regards,

Tom
