ArrayMap<String, EscValue> TemplateDlg::MakeVars0()

```
{  
    ArrayMap<String, EscValue> var;  
    String n = ~package;  
    int q = n.ReverseFind('/');  
    var.Add("PACKAGE", q >= 0 ? n.Mid(q + 1) : n);  
    var.Add("PACKAGE_TOUPPER", ToUpper(n));  
    var.Add("PACKAGE_TOUPPER_CAPS", ToUpper_Caps(n));  
    return var;  
}
```

Mirek

If "package" holds a path and a filename,

only the filename goes into "PACKAGE", but

both the path and the filename go into "PACKAGE\_TOUPPER" and

both the path and the filename go into "PACKAGE\_TOUPPER\_CAPS".

Is that what you want?

I myself would prefer to find just the filename in ("PACKAGE\_TOUPPER" and)  
"PACKAGE\_TOUPPER\_CAPS".

Werner
