idkfa46 wrote on Fri, 02 October 2020 08:51 The only solution I have found till now is to reset the database at the language change... it's not the best solution in my mind because I lose possible user settings :(

Matteo

Sorry I have not replied sooner, but it is not at all clear to me what you are trying to achieve...

Now it seems like you have some texts in database and you want these to change based on current language?

If these are there, the Insert really is not the SQL command you want to use. What about Update? (of course, you need to insert these records first) :)

Mirek
