```
taxQTF << DbIStr(sumTaxable) << ":: " << DbIStr(sumNontaxable) << ":: " << DbIStr(sumTax) <<
  ":: " << DbIStr(sumParts) << ":: " << DbIStr(sumTotal) << "}}";
```

Should work without DbIStr.

```
taxQTF << sumTaxable << ":: " << sumNontaxable << ":: " << sumTax << ":: " << sumParts << "::
" << sumTotal << "}}";
```

<< converts everything to text.... (But then you will probably want to convert to two decimal places, so you will need some function there anyway).
