
Subject: About Nuller and Null

Hi,

I failed to find much documentation about Nuller and Null. Then I just looked around the source and tried to put together a generic macro to support Nuller/Null in a class.

Could someone with deeper understanding confirm if my following NULLSUPPORT -macro covers all the relevant aspects of supporting Null for a class?

```
#define NULLSUPPORT(x)\
  CLASSNAME(const Nuller&){ SetNull(); }\
  void SetNull(){ x=NULL; }\
  bool IsNullInstance() const { return IsNull(x); }
```

```
class A{\
public:\
  typedef A CLASSNAME;
```

```
  NULLSUPPORT(a);
```

```
  int a;\
  int b;
```

```
  A(){\
    a=0;\
    b=0;\
  }\
};
```

Best regards,

Tom
