Subject: About Nuller and Null Posted by Tom1 on Sat, 10 Oct 2020 08:58:09 GMT

Hi,

I failed to find much documentation about Nuller and Null. Then I just looked around the source and tried to put together a generic macro to support Nuller/Null in a class.

Could someone with deeper understanding confirm if my following NULLSUPPORT -macro covers all the relevant aspects of supporting Null for a class?

```
#define NULLSUPPORT(x)\
CLASSNAME(const Nuller&){ SetNull(); }\
void SetNull(){ x=Null; }\
bool IsNullInstance() const { return IsNull(x); }

class A{
public:
  typedef A CLASSNAME;

NULLSUPPORT(a);

int a;
  int b;

A(){
  a=0;
  b=0;
};
```

Best regards,

Tom
