Subject: operation involving "\\" x "\" characters in directories and files

I initially realized that the getDirectories function returned without the "\".
I saw that you use DeQtf to correct "\".
I just didn't realize that getDirectories also adds "´"
in your content and I ended up using the replace string at the end.

I question: is it all this or is there a other alternative?

i.e.
```
 String dir = DeQtf(GetCurrentDirectory());
 dir.Replace("`","");
```
