I have ported mbtray into U++. Though it is still in a very early stage of development, I still wish someone to tell me whether the present script is working or not.

Steps to test:

tar jxvf trayicon.tar.bz2
cd trayicon
make
cd out/trayicon/GCC32-Gcc32-Gui-Linux-Main-Shared/
./trayicon

ps. you might need to modify the Makefile if your upp directory is not ~/upp

Many thanks.
