Or we can just remove backtrace? I do not remember a single time it helped and this is continuous nuisance on all systems...

I'm personally fine with that.

Your change has fixed the problem.

Thanks!

Ideally it would be great to provide Docker file/files for Upp. People seem to like Docker.

I am in if you will provide me with some "seed" docker (so that I can automate it later). But not for this release.

Mirek
