I have put the whole function on `#ifdef`, so hopefully tomorrow release will be fixed...

You also need to do the same thing to the code below

```
#if defined(PLATFORM_POSIX) && defined(COMPILER_GCC) &&
```

```
!defined(PLATFORM_ANDROID)
```

```
# include <execinfo.h>
```

```
# include <cxxabi.h>
```

```
#endif
```

`execinfo.h` is not available by default in Alpine Linux.
