Well I was more thinking about using one of the following options
 * Glibc provides the very handy backtrace() and backtrace_symbols()   ==> should be available on windows with CLANG
 * http://boostorg.github.io/stacktrace/stacktrace/getting_star ted.html (never tried)
 * Or with MSVC StackWalker library (never tried neither)

This will print the stack trace as it would be in the debugger : can get very very helpful with client crashes
