As there no complaints so far, I am thinking about releasing soon...

I'm mainly running on linux (not this RC per se, I regularly update from github) and I notice a few quircks with debugging (F5) or running (ctrl+F5) but that's probably for another topic.

I tested this release on Windows7, no problems.

Also tested on Windows 10, no problems. I tried packaged Clang and MSVS 2019 community edition

kind regards

edit: removed a few lines I wasn't entirely sure about
