Hello BetoValle,

HeaderCtrl controls the tab/column visibility.

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

struct App : TopWindow {
    ArrayCtrl list;
    App()
    {
        Sizeable().Zoomable().CenterScreen().SetRect(0, 0, 640, 480);
        Add(list.SizePos());
        list.AddColumn("Column 1");
        list.AddColumn("Column 2").HeaderTab().Hide(); // HeaderCtrl controls tab/column visibility.
        list.Add("Hello", "world!");
        list.Add("Ultimate++", "rocks!");
        list.WhenBar = [=](Bar& bar) { ColumnMenu(bar); };
        list.ColumnWidths("100 200"); // Sets column widths...
    }

    void ColumnMenu(Bar& bar) // A context (right click) menu to set tab visibility
    {
        HeaderCtrl& header = list.HeaderObject();
        for(int i = 0; i < header.GetCount(); i++){
            bool visible = header.IsTabVisible(i);
            auto label = header[i].GetText();
            bar.Add(label, [=] { list.HeaderObject().ShowTab(i, !visible); }).Check(visible);
        }
    }
};

GUI_APP_MAIN
{
    App().Run();
}
```

You can use HeaderCtrl::SetTabWidth() method to set the width at any time.

Best regards,
Oblivion
