i build function to remove in the class

```
class HWId : public WithmeuL<TopWindow> {
private:
    void fxRemove();
    int keyId;
public:
typedef HWId CLASSNAME;
.....
void HWId::fxRemove(){
    int i = grid.GetCursor();
    String s;
    s << i;
    PromptOK( s );
    grid.Remove( i );
}
.....
```

..... below in constructor compilation error occurs
main.cpp (86): error: 'this' cannot be implicitly captured in this context

```
HWId::HWId()
{
    CtrlLayout(*this, "Titulo da janela");
    keyId = Ctrl::RegisterSystemHotKey(K_CTRL_DELETE, []{ fxRemove(); } );
}
```

I had done a simple test before with:

```
int id = Ctrl::RegisterSystemHotKey(K_CTRL_DELETE, [] { PromptOK("Ctrl delete ok"); });
```

it didn't generate an error, I thought I could put a function in place of the promptOK
so how should i write the code?

there is probably another alternative using a WhenAction but I don't know how to write this option.

Thanks
