It is now possible to specify Convert class singleton inline with LambdaConvert:

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

GUI_APP_MAIN
{
    ArrayCtrl list;
    list.AddColumn().SetConvert(LambdaConvert([](const Value& v) { return FormatIntRoman(v); }));
    for(int i = 0; i < 100; i++)
        list.Add(i);

    TopWindow win;
    win << list.SizePos();
    win.Run();
}
```
