Hi Folks,

I am looking for a sample code to split a string according to a set of predefined delimiter, which is very similar to the following C# code.

```
char[] delimiterChars = { ' ', ',', '.', ':', '\t' };
```

```
string text = "one\ttwo three:four,five six seven";
```

```
System.Console.WriteLine($"Original text: '{text}'");
```

```
string[] words = text.Split(delimiterChars);
```

```
System.Console.WriteLine($"{words.Length} words in text:");
```

```
foreach (var word in words)
```

```
{
```

```
    System.Console.WriteLine($"<{word}>");
```

```
}
```

Thank you so much!

Best Regards

David WANG
