Quote:We might want to have means to define "default" search engine for Alt+G....

OK, I'll add that to the mechanism.

Still I think we shouldn'T add Google and Upp-website on the configurable list. They should be hard-coded.

And how should we handle configuration?

Currently I use binary serialization, but it is far from ideal.
For trunk, I suggest we use a separate file ("ide.websearch" or "ide.search") with JSON or other format

Best regards,
Oblivion
