Hi,

There is a plugin for Visual Studio to import a *.pdb file as project here: <https://marketplace.visualstudio.com/search?term=pdbproject&target=VS&category=Tools&vsVersion=&subCategory=All&sortBy=Relevance>

After installing it permits to open a *.pdb file as a project and generates a *.vcxproj.
It works for me so far, I dont intend to build in Visual Studio, only browse, possibly edit or debug.

So far I found, the pdb file must be generated by the matching Microsoft compiler version, clang didnt work.

Have fun!

Peter
