Hello Klugier,

It cover most used Layout designer functions so in my opinion having it documentated can only be a good thing !
However I have some questions not related to the documentation but more about the Layout designer :

Both button are for move up/Down a widget in the widget list, what's the purpose of having a widget higher than another ? Is it only related to overlapping/depth of widget (the first on liste is the first draw so it can be hide by last on the list if draw at the same point) ?

This button is for ignoring min size, what's the point of ignoring min size for a widget ? is it to hide it by setting is size to 0 ?

On most widget, we found this two button named 'Ctx' and 'Id' they are always related to 'Set Label' or 'Tip', what's their utilities ? (for thoses who dont know 'Tip' is used to set a quick tip/description on button :)
