Hello,

IMO I like upm, it remind me npm (nodejs packet manager) maybe I can propose ufpm (ultimate framework packet manager)

I also like the way Oblivion is thinking : upp-followbythefeatures

Also, just to let you know (maybe it can give ideas)

- One of few PHP packet manager is named Composer

- Python packet manager is named PIP(packet installer for python)

- The .NET (c#) packet manager is named NuGet

- Java have several package manager : maven, gradle

EDIT: I also really like upphub
