(only when I went to publish I saw that we reached the same agreement)

before that, some mistakes and attempts here i made some speculation and i believe i have reached a viable situation although not 100% precisely because the screen of the final application does not come forward,
but right now, on the windows taskbar the application icon is "blinking" (*).

(*)temporary solution:

```
  n = GetWindowIdFromCaption ("Backup", true); // Backup is the title of the main window
    if (n> 0) {
      ::ShowWindow ((HWND) n, 9);
      ::SetForegroundWindow ((HWND) n);

    }
```

Thanks
