Hello Mirek,

We should give people time to move their bazzar packages. Also their should be period when UppHub is tested and protoocol changes are acceptable. I think we need at least 2-3 release. 2022.1 release seems reasonable to me. Also, we should warn users if they move to bazaar and MyApps-bazaar assembly that it will be removed and the UppHub is alterantive. From my perspective this is fair approch.

Also, before releasing UppHub we need good documentation for it.
