I just grabbed lastest Nightybuild for Linux/BSD/Solaris
I have checkout my folder with the lastest SVN trunk
then I have run ./install to create umk/TheIDE.

Here is what happen :

/usr/lib/gcc/i686-linux-gnu/8/include/emmintrin.h:701:1: error: inlining failed in call to always_inline
'__m128i _mm_loadu_si128(const __m128i_u*)': target specific option mismatch
 _mm_loadu_si128 (__m128i_u const *__P)
 ^~~~~~~~~~~~~~~

if I do make theide same error happen.

Do the problem come from my system or it come from U++ ?

PS: my system is a fresh Debian + KDE plasma (all dependencies have been installed same for
linux-headers)
