Hello,

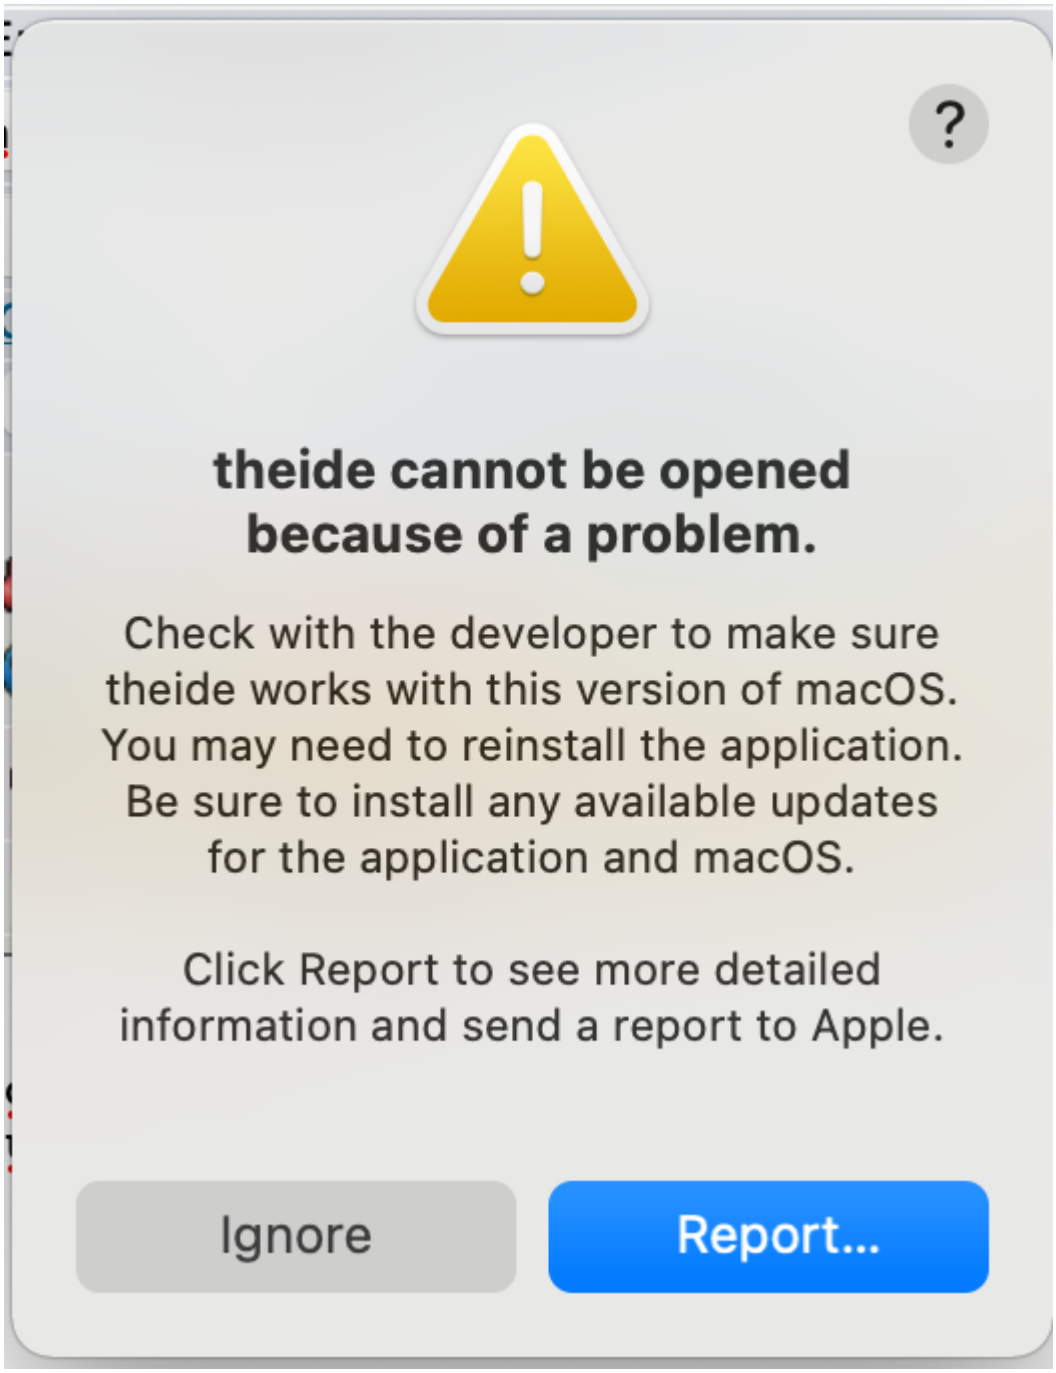

I created following ticket in #2137 that describes that TheIDE bundled with tar can not be executed on latest macOS 11.1 (x86_64 architecture). Error dialog below:

I saw this issue before. It was when previous macOS was release. My question here is can we make it bulletproff. I mean despite the system update TheIDE should works. Many other apps like Firefox doesn't have this problem after update. So, there might be problem in our macOS build infrastructure.

theide cannot be opened because of a problem.
Check with the developer to make sure theide works with this version of macOS. You may need to reinstall the application. Be sure to install any available updates for the application and macOS.
