Hello,

I created following ticket in #2137 that describes that TheIDE bundled with tar can not be executed on latest macOS 11.1 (x86_64 architecture). Error dialog below:

I saw this issue before. It was when previous macOS was release. My question here is can we make it bulletproff. I mean despite the system update TheIDE should works. Many other apps like Firefox doesn't have this problem after update. So, there might be problem in our macOS build infrastructure.
