Hello Pradip,

All is fine here thanks

I have a version which contains the necessary corrections ... but also comes with a lot of other modifications : corrections and enhancements.

The modifications are the following:

The main modifications aim to allow easy overriding of the properties editors (so that they can be fully customized (my graphic designer talent is very very bad ;))

To achieve this I had to kick out inheritance in Style classes (simpler this way) ==> No inheritance at all must be used at all !

==> this implies the StyleDefault() methods may need update

==> the main properties window (the one accessible when hovering graph area now displays all available properties as TABs) I also did some renaming (very few) where needed

One renaming was to follow a simple naming convention : when in a GraphElement class, getter and setter should be named GetElement...() SetElement...()) ==> so no confusion with GraphDraw / GraphCtrl methods Bug corrections

Here is the updated package
