Hello,  
Thanks to sandbox concept, I have several UPP versions on my Linux computer.  
When I open a project created in the latest UPP in an old one (15260 - the latest stable),  
the .lay file gets corrupted: all national symbols are distorted.  
I noticed that in the new version all class names in .lay files are prefixed with UPP::  
In old .lay files there are no prefixes.

Best regards.

Victor
