Hello Xemuth

You gave me something to study ...

First I had to add the Core/SSL package to the Core Package.

Then I had to include the Libs

#include <Core/Core.h>
#include <Core/SSL/SSL.h>

Now with

img = StreamRaster::LoadStringAny(HttpRequest("https://www.ultimatepp.org/0i.png").Execute()); everything works fine.

Thank you very much. Best Regards
