Hello Xemuth

You gave me something to study ...

First I had to add the Core/SSL package to the Core Package.
Then I had to include the Libs

```
#include <Core/Core.h>  
#include <Core/SSL/SSL.h>
```

Now with
img = StreamRaster::LoadStringAny(HttpRequest("https://www.ultimatepp.org/0i.png").Execute());
everything works fine.

Thank you very much.
Best Regards
